The research paper provides an in-depth analysis focusing on the impact of fear of failure on entrepreneurial intentions among the UAE population, particularly among university students. The study emphasizes the importance of understanding these dynamics within the context of the UAE's strategic goals for innovation and entrepreneurship-driven economic development. Utilizing a mixed-methods approach, the study combines quantitative surveys with qualitative interviews to explore the multifaceted nature of fear of failure. Key findings reveal that cultural, educational, and economic factors significantly influence fear of failure and, consequently, entrepreneurial intentions. Recommendations include targeted educational reforms, the development of supportive entrepreneurial ecosystems, and initiatives to foster resilience and risk-taking among potential entrepreneurs. This summary encapsulates the essence of the research, highlighting its contribution to the broader understanding of entrepreneurship in the UAE.
